Dr. P. O. Williams, M.B., F.R.C.P.
Director and Secretary
The Wellcome Trust
1 Park Square West
London, NW1 4LJ
England

Dear Dr. Williams:

This is to follow-up on our lunch conversation during your brief visit here last November, when you indicated The Wellcome Trust's possible interest in supporting a fellowship program in which British and possibly other Western European nationals would receive advanced postdoctoral training, with particular emphasis on fields related to parasitology, at The Rockefeller University.

As you know, The Rockefeller University has been a pioneer in applying the basic sciences to problems of biology and medicine, and has set standards of excellence for postdoctoral training in the biomedical sciences. In parasitology, several laboratories are currently investing their energies in research of such tropical diseases as malaria, trypanosomiasis and leishmaniasis, among others.

After giving the proposition of a Wellcome-sponsored Fellowship Program further thought, and discussing it with a number of my colleagues, we would like to propose starting with two or three young scholars entering the program each year, with a view to obtaining postdoctoral training in the areas of their choice, usually for a period of two years. To have the desired impact, the program should operate for at least five years.

We envision that The Wellcome Trust would advertise the availability of the fellowships in Britain (and Europe). Initial review of the applications would be by a scientific advisory body, the composition of which can

be determined by mutual agreement. The final decision as to admittance to the program would rest with the laboratory head here under whose tutelage the fellow wishes to be trained.

We believe the optimum timing for such advanced training would be after a Ph.D. or M.D. has done one or two years, but no more than four years, of post-graduate work at another institution, in either basic biology or parasitology, and whose career goals have clearly been identified to lie in the area of endemic tropical diseases.

The University would bring Wellcome Fellows to the United States under the auspices of its Exchange Visitors (J Visa) Program. Suitable housing, for the duration of the training period, would be made available to the fellow (and family). Fellows (and their families) could be enrolled in the University's health insurance plans. The University would be responsible for the disbursement of the fellowship stipend and other administrative details.

A sample budget, setting the 1979 stipend at \$17,500, which we believe is sufficiently high to attract the kind of person we are seeking, is attached. The two items on the budget which will be determined individually are a dependence allowance for children, and a travel allowance based on actual costs.

Also enclosed is a copy of the University's last Annual Report. As you peruse it, I would like to draw particular attention to the work being carried on in the laboratories of: Biochemical Cytology, under the direction of Christian de Duve; Cellular Physiology and Immunology, under the direction of Zanvil A. Cohn and James G. Hirsch; Medical Biochemistry, under the direction of Anthony Cerami; and Parasitology, under the direction of William Trager. Many other laboratories, such as those in the fields of cell biology, genetics and immunology, as well as some of the clinically oriented ones, would welcome trainees with a primary interest in parasitology. For example, we are recruiting a young assistant professor who has already made important contributions to the molecular genetics of a free-living nematode. And I want to stress

Dr. P. O. Williams, M.B., F.R.C.P.

that we are searching energetically for a world-renowned figure to succeed Professor Trager after his retirement.

We are also initiating a number of programs in collaboration with the neighboring institutions (Cornell University Medical College and Sloan-Kettering).

We look forward to The Wellcome Trust's reactions to this proposal, and my associates and I would be pleased to give you additional details on any aspect of it.

Sincerely,

Joshua Lederberg
